

For floor protection during construction

Jackon® Tuprotec mat is designed to protect floors during construction and renovation. Flexible and moisture-insulating. Jackon® Tuprotec protects floors from scratches, dirt and water. Due to its durable composition, the protective mat can be used several times.

Insulates from moisture

The surface film prevents paint, water and other liquids from entering the floor coating.

Breathable

Specially designed foam and micro-perforated surface film penetrate the structural moisture from the subfloor (VTT-S-06-00287/EN 19.1.2006).

Stays in place

The PE foam layer on the bottom adheres lightly to the floor surface. This is why Tuprotec does not slide on the floor but stays firmly in place.

Protects

Protect the floor from minor mechanical damage.

Reusable

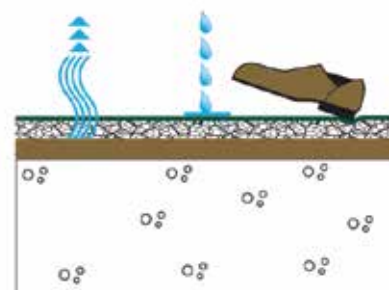

Tuprotec tolerates wear and tear well and can be used again and again. Can be disposed of by incineration.

No separate taping

Jackon® Tuprotec has sticky overlap – no separate tape needed. Do not tape to the floor.

Finnish

Jackon® Tuprotec is designed and manufactured in Finland.

Roll sizes: 18.7 m² and 44 m²

Width: 1.1 m

Thickness: 2.3 mm

Weight: 100 g/m²

Roll weight: 1.9kg and 4.5kg

Material: ground layer

PE foam, microporous PE film
